*This assumes 10,000 invested in each position since 2 January 2014.*

## The Power of Earnings

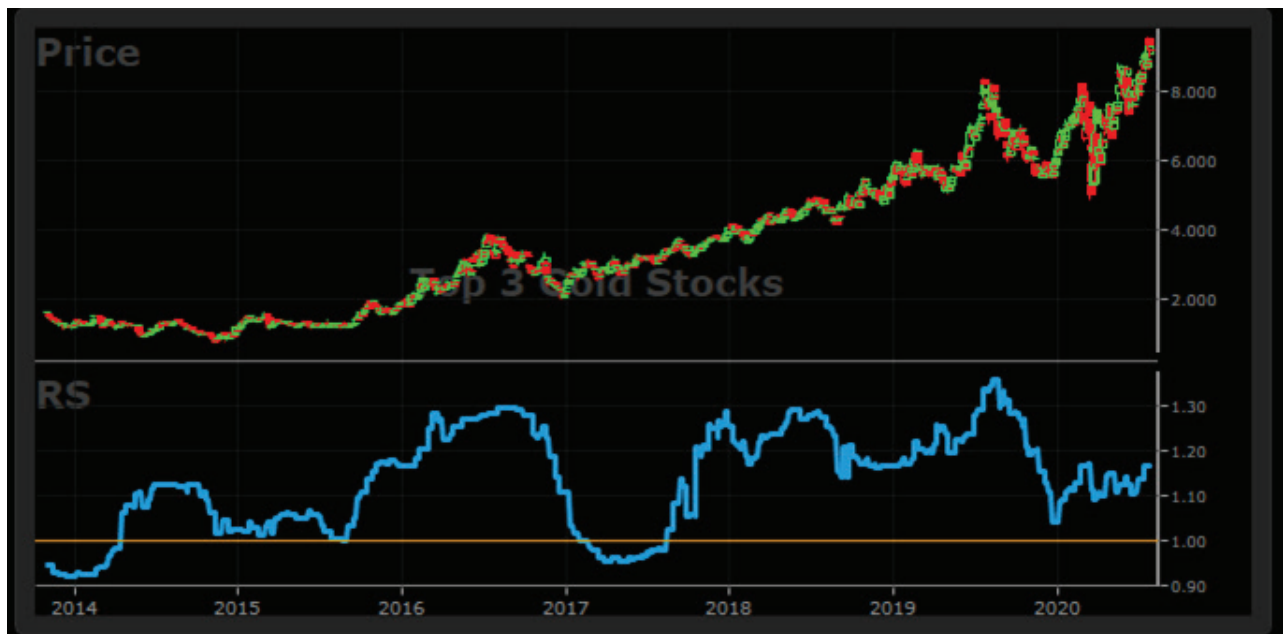

Price Appreciation Potential as we have seen time and time again over the years at VectorVest. Stocks with strong consistent rising earnings (EPS) scores over the years are stocks with rising share prices. No matter what industry or sector you are interested in, ensure your stocks have rising earnings! For The top 3 Gold Stocks Earnings Profiles (RRL, NST and SAR) is as follows:

\* The VectorVest EPS is a 12-month leading forecast on earnings.

## The Power of Safety

The VectorVest Relative Safety (RS) indicator is on a scale of 0 -2. The higher above 1, the better the given safety track record for a given stock. The 3 given gold stocks have had RS scores that have had solid scores well above 1 on average. By finding these top RS companies, you can create a portfolio of strong financial performers. The Safety outlook for the Gold Stocks is as follows:

VectorVest Stop: \$5.23

## Glossary of Key Indicators in this Report:

Please note that in the VectorVest system any stock whose current price is below its Stop-Price gets an 'S' recommendation. This does not mean that VectorVest does not 'like' the stock, or that it should be sold immediately. However, it is a warning sign that the stock's price performance is weak. High RS stocks tend to have good price stability and do not fall below their Stop-Price very often. On the other hand, low RS stocks are generally very volatile and frequently fall below their Stop-Prices

**EPS (Earnings per Share):** EPS stands for leading 12 months Earnings Per Share. VectorVest determines this forecast from a combination of recent earnings performance and traditional fiscal and/or calendar year earnings forecasts.

**GRT (Earnings Growth Rate):** GRT reflects a company's one to three year forecasted earnings growth rate in percent per year.

**RS** is an indicator of risk. RS is computed from an analysis of the consistency and predictability of a company's financial performance, debt to equity ratio, sales volume, business longevity, price volatility and other factors.

**VST** is the master indicator for ranking every stock in the VectorVest database. VST is computed from the square root of a weighted sum of the squares of RV, RS, and RT. Stocks with the highest VST ratings have the best combinations of Value, Safety and Timing.
