2018 MODEL PORTFOLIOS

US EDITION

SPECIAL REPORT

VectorVest® 7
Welcome to the VectorVest Model Portfolios, a collection of complete trading-systems that remove all the guesswork from investing and deliver phenomenal investment success. These systems have been created from thousands of historical tests, and in some cases, years of real-time trading to consistently and dramatically outperform the S&P 500. Each system provides you with quick, precise answers for when to buy, what to buy and when to sell. They are, by far, the easiest ways to take advantage of all that VectorVest has developed in more than 28 years of stock market experience.
When to Buy

The only way to make money in the stock market is to buy low and sell high. And nothing has more influence in helping you accomplish that goal than market timing; that’s why market timing is the very foundation of every Model Portfolio Trading System.

Rather than use subjective guesses at where the market is going, VectorVest uses tried-and-true, rule-based timing signals. These signals are unmistakable and can easily be found right on VectorVest’s Home Page*. Each Model Portfolio system uses either the ‘RT Kicker Combo’ (RTC), the DEW (DEW), or the ‘Confirmed Market Call’ (CC) to signal when to open positions.

Each of these timing systems do an incredible job of alerting you to market turning points, allowing you to add positions at market bottoms and protect your profits, short sell or buy contra ETFs at market tops. The Confirmed Calls provide slower, more cautious signals, while the RT Kicker Combo and DEW generate faster signals for active traders. Using either system will ensure that you keep your portfolio on the right side of the market and avoid the catastrophic damage of major trend reversals.

* DEW Timing is available by viewing the MTI graph.
What to Buy

Now that you know when to buy, you’ll need to know what stocks (or ETFs) you should buy or sell short. Selecting from hundreds, let alone thousands, of stocks can be an overwhelming, time-consuming, pain-in-the-keister. But not with the Model Portfolio System.

VectorVest has conducted more than 4,000 historical portfolio tests to reveal which of our powerful, programmed stock scans provide the most consistent and profitable results. Each system is comprised of a bullish search for market ‘up’ signals and some offer a complimentary bearish search to take advantage of market downtrends. Combined with market timing and reasonable stop-losses, we’ve identified the searches that deliver outstanding gains through all market conditions—up, down or sideways!

Each search is conveniently located in VectorVest’s search tool, UniSearch. There is a Model Portfolio Search Group, which houses all the searches.

The performance of these searches is all due to VectorVest’s proprietary indicators. These indicators are what instantaneously identify and rank the best stock picks for your Model portfolio. Just select a search, click ‘Run Search’ and you’re ready to go!
When to Sell

It seems the hardest decision an investor faces is determining when to sell a stock. “Should I take the profit I have?” “Should I sell now before my loss gets worse?” “Will the price go up as soon as I sell it?” These are questions that almost every trader struggles to answer. Well, the wrestling match is over. From thousands of tests, spanning years of market turmoil, VectorVest has determined the ideal stop-losses and money management that are a perfect match for each individual Model Portfolio System.

When you put it all together—precision timing, exceptional stock selection and sensible money management—you have a collection of the finest, most user-friendly trading systems available anywhere...and you can get started with just three clicks!

You’re Just 3-Clicks Away from Model Portfolio Success...

Get ready for action! VectorVest’s Model Portfolio Success Action Plan, has made it so easy to get started that it only takes three clicks of your mouse to get started. Whether you’re brand new to VectorVest or one of our expert Elite members, you’ll be able to immediately start trading (or paper trading) any Model Portfolio system.

2. Click ‘Model Portfolios’
3. Click the drop-down arrow to select your Model Portfolio System.
The Genius with AutoTimer

It’s hard to believe that following the Model Portfolio Success systems could get any easier than using the “Daily Action Plan”...but they did. With the addition of VectorVest’s AutoTimer tool and prebuilt Model Portfolio trading templates, it takes less than 10 seconds to set up a completely automated, paper portfolio. With convenient email and text alerts, you don’t even have to log in to know exactly what trades to make and when to make them—we call it “The Portfolio Genius.”

The Genius continually checks your portfolio for stop-losses, changes to timing signals and new trades. Not a single detail is missed. Every trade is executed with precision, entirely eliminating mistakes and destructive emotions... just watch The Genius do all the work and follow along.

1. Select the ‘Portfolios’ tab.
2. Click ‘New’ to start a new paper portfolio. Give it a name and click ‘OK.’
3. Click the ‘Settings’ button on the Genius toolbar.
4. ‘Select and Existing Trading System.’ After selecting your favorite system, click ‘OK.’
5. Customize your ‘Alert Settings’ in the upper right corner. Click ‘Save.’

The Genius is at work!
Frequently Asked Questions

Q: When is the best time to start using Model Portfolio Success?

A: No matter which Model Portfolio system you choose, VectorVest has found that starting on a new market timing signal consistently provides the best results.

Q: I am following a Model Portfolio that uses the Confirmed Calls but the ColorGuard on the Home Page is telling me to do something different. What should I do?

A: The ColorGuard is a faster, shorter-term market timing system, the Confirmed call is a slower, more prudent system; they won’t always be in agreement. You can follow the system you selected or use your own discretion by choosing to only make trades when both timing systems are in agreement, or you can simply stick to the trading plan for the system you selected and follow the Daily Action Plan. It will tell you exactly what to do for the system you selected.

Q: Do I have to trade all the stocks the Daily Action Plan is showing me? Can I cherry-pick my stocks?

A: No, you do not need to open all your positions at once, nor do you have to use all the stocks that the Daily Action Plan is showing. If you like, you may certainly cherry-pick your favorite selections. We encourage it!

Q: When the market timing signal changes, should I close all my positions? (Or when “Entering a new situation”)

A: Not necessarily. We refer to a new timing signal as “a new situation.” Check Appendix for the appropriate “turn action” your Model Portfolio System uses. In many cases, you will only close positions if your stop-loss is met, not when the market timing signal changes.

Q: What does “Buy Long” and “Sell Short” mean?

A: When you buy a new stock, you’re “buying long,” but when shorting a stock, you’re selling something you don’t own, this is referred to as “selling short.”

Q: Why do the stocks I’m supposed to buy have ‘Sell’ Recommendations? Should I really buy them?

A: Some of the stocks found by your buying search may be rated a ‘Sell’—this is can be a very profitable technique called “bottom-fishing.” Basically, you’re buying stocks that have been beaten down in price early in the expectation they will rise with market—these stocks are often some of the largest, fastest gainers at market turning points.
Q: Do I have to short stocks?

A: Nope. In testing and in real time trading we found that taking advantage of both market uptrends and downtrends improved our gains and lessened volatility, but some investors are unable or uncomfortable shorting. All the systems still outperformed the S&P significantly using just the uptrends to buy stocks, but if you would like to include the downside, consider using contra ETFs or stock options as a replacement for shorting.

Q: There are several Model Portfolio in the Portfolio section of VectorVest; shouldn’t I just buy those stocks?

A: No. The positions in the model portfolios were most likely opened on a different timing signal than the one on which you’ll be starting. Just consult the Daily Action Plan for your stocks. Only open the number of positions you need to fill your stock portfolio. If there’s a duplicate of something you already have in your portfolio, move to the next stock in the list. (Tip: Afterward, you can set up a paper portfolio to be managed by VectorVest’s Portfolio Genius. Using the AutoTimer, the Genius will send you alerts when your stop losses are met and notify you which new positions to open.)
